Fire safety systems for marine and offshore environments are critical for protecting lives and assets, given the unique dangers of being at sea. These systems, including high-pressure water mist and carbon dioxide systems, provide fast and effective fire suppression. High-pressure water mist systems use minimal water while controlling fires efficiently by releasing fine water droplets through specialized nozzles, protecting key areas like engine rooms and living spaces. Carbon dioxide systems are also widely used for fire suppression in enclosed spaces. Both technologies ensure maximum safety for passengers and crew while minimizing damage and downtime.
