The global Fire Simulation Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Fire simulation software is based on mathematical models and computational fluid dynamics (CFD) technology to simulate the process of fire development. It takes into account factors such as fire source, fuel, oxygen and environment, and uses computational fluid dynamics numerical analysis methods to predict fire diffusion paths, burning speed, smoke distribution, temperature distribution, oxygen concentration changes and other parameters. The software can also simulate the impact of flame heat radiation to evaluate the safety of building structures and personnel.

Pay attention to fire safety issues: Fire is a common disaster that poses a huge threat to people's lives and property. As people pay more attention to fire safety issues, fire simulation software has developed rapidly to help people better understand the laws and characteristics of fires and improve fire prevention and response capabilities.

Promoted by scientific and technological progress: The development of fire simulation software is inseparable from the promotion of scientific and technological progress. With the continuous development of computer technology, computing power and accuracy have been greatly improved, providing more reliable and accurate data support for fire simulation. At the same time, improvements in numerical calculation methods have also provided important support for the development of fire simulation software.

Demand for fire protection work: Fire protection work is one of the important tasks to ensure public safety, and fire is one of the most common and destructive disasters in fire protection work. Through fire simulation software, fire departments can better

understand the development patterns and hazards of fires, formulate more scientific and effective fire extinguishing and rescue plans, and improve the efficiency and safety of firefighting work.
