Not all fires are the same. Per NFPA 10, burning may be classified into one or more of the following fire classes.

Class A fires are fires in ordinary combustibles such as wood, paper, cloth, rubber, and many plastics. Class B fires are fires in flammable liquids such as gasoline, petroleum greases, tars, oils, oil-based paints, solvents, alcohols. Class B fires also include flammable gases such as propane and butane. Class B fires do not include fires involving cooking oils and grease. Class C fires are fires involving energized electrical equipment such as computers, servers, motors, transformers, and appliances. Remove the power and the Class C fire becomes one of the other classes of fire. Class D fires are fires in combustible metals such as magnesium, titanium, zirconium, sodium, lithium, and potassium. Class K fires are fires in cooking oils and greases such as animal and vegetable fats.

There are different fire extinguishing agent options for different fire types. Common fire extinguishing agent types are: Water and Foam, Carbon Dioxide, Dry Chemical, Wet Chemical, Clean Agent, Dry Powder, Water Mist, Cartridge Operated Dry Chemical ect.
