The fire extinguishing and explosion suppression system in the comprehensive protection system has a very important position in the military field. For an armored vehicle to give full play to its combat effectiveness, one of the very important conditions is that it can maintain the survivability of its crew after it is penetrated by a shell. According to statistics, during the Second World War, 40% of all tanks penetrated by anti-tank weapons caused fires; in Vietnam and the Middle East wars, about 50% of all tanks lost were related to the fires of fuel and ammunition inside the vehicles. Taking into account the improvement of the effectiveness and quantity of various anti-tank ammunition, in future large-scale military conflicts, if armored vehicles do not adopt appropriate explosion suppression measures, there will be a higher rate of casualties and vehicle damage. Because the fire suppression and explosion suppression system as the core of the armored vehicle's integrated protection system is so important, the fire suppression and explosion suppression system is called the last line of defense for armored vehicles. At present, the fire suppression and explosion suppression system has been used as the standard equipment of armored vehicles.
