The global Fire System Aircraft market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Aerial firefighting refers to the action or technology of using aircraft, helicopters or other aviation equipment to put out fires from the air, usually used for large-scale fires such as forest fires. The seaplane that can draw water on the lake surface can quickly spray the fire back and forth. A special water tank is used to prevent the aircraft from being carried to hold the fire extinguishing agent or water. The source can be ground filling or drawn from the lake.
