First-in-Human (FIH) Supplies refer to the initial batch of a new drug or therapeutic product that is produced specifically for the first clinical trials conducted in human subjects. This phase typically follows extensive preclinical testing and is crucial for assessing the safety, tolerability, pharmacokinetics, and pharmacodynamics of the drug in humans. FIH Supplies are intended for use in Phase I clinical trials, where the primary goal is to evaluate the safety and dosage of the drug in a small group of healthy volunteers or patients. The manufacturing of FIH Supplies must comply with Good Manufacturing Practice (GMP) regulations to ensure the quality, safety, and consistency of the drug product. The quantities produced for FIH Supplies are often smaller than those for later phase trials, as they are primarily focused on initial safety assessments rather than efficacy.
