Fish Grading Equipment is a system used in the seafood industry to sort fish based on size, weight, or species. It typically consists of a series of mechanical or automated devices, such as conveyors, vibrating screens, or rotating drums, that separate fish into predefined categories. This equipment helps ensure uniformity in the size of fish, which is essential for processing, packaging, and meeting market standards. Fish grading systems improve efficiency in sorting large volumes of fish, reduce manual labor, and maintain quality control, ultimately enhancing the overall productivity of fish processing operations. The price of fish grading equipment is greatly affected by its technical complexity, sorting accuracy, processing capacity and automation level. The cost of equipment with different configurations varies significantly, and its unit price usually ranges from US$10k to US$50k.
