Fish head cutting machine accurately and efficiently remove fish head and tail. It is widely used in the aquatic products processing industry.

Fish deheading is a special equipment used to quickly remove the head of fish. This kind of equipment is usually used in fish processing factories, fishery processing places, catering industry and food processing industry, etc., to improve fish processing efficiency and reduce labor intensity. Put the fish to be processed into the feed port of the fish deheading machine. Fish deheaders are equipped with blades or cutting devices that can be adjusted to the size and shape of the fish. As the fish pass the blade or cutting device, their heads are cut off quickly and accurately while the body parts continue to move forward. The head-removed fish head and the head-removed fish body are respectively discharged through different outlets.
