The global Fish Shrimp Counter market size is predicted to grow from US\$ 90 million in 2025 to US\$ 127 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global Fish Shrimp Counter production reached approximately 17,386 units, with an average global market price of around US\$ 5,004 per unit. Fish Shrimp Counter is a specialized automated or semi-automated device designed to accurately count the number of fish, shrimp, or other aquatic organisms in aquaculture, seafood processing, or fisheries management scenarios, replacing labor-intensive and error-prone manual counting. It typically leverages technologies such as machine vision (via high-resolution cameras and image recognition algorithms), sensor-based detection (e.g., infrared, weight, or optical sensors), or conveyor belt integration to identify and tally individual specimens—adapting to variations in size, species, and movement (e.g., distinguishing overlapping shrimp or fast-swimming fish).

The Fish and Shrimp Counter industry is currently witnessing several significant trends, along with attendant opportunities and challenges. Technological advancements are a major trend, with the integration of artificial intelligence and machine learning enhancing the accuracy and efficiency of counting, able to adapt to different species, sizes, and movement patterns of fish and shrimp. The growing aquaculture and seafood processing sectors, driven by increasing global demand for seafood as a healthy protein source, present substantial opportunities. For example, in aquaculture, accurate counting helps optimize stocking densities, feed management, and harvest planning, while in seafood processing, it ensures correct product quantities for packaging and sales. However, challenges abound. High initial costs of advanced counter systems can be a deterrent for small - scale operators in the aquaculture or fisheries industries. Additionally, maintaining the accuracy of these counters in diverse and often harsh aquatic environments, such as varying water quality, temperature, and lighting

conditions, is difficult. Competing with less - sophisticated, lower - cost counting methods that some businesses may still prefer due to budget constraints also poses a challenge to the widespread adoption of more advanced fish and shrimp counters.
