Five-Axis CNC Tool Grinding Machine is a high-precision machine tool used to manufacture and regrind cutting tools such as drills, end mills, reamers, form cutters, ball-nose tools and special carbide tools. It uses five-axis coordinated motion, high-speed spindles, grinding wheels, automatic tool loading and dedicated software to process complex flute geometry, cutting edges and tool profiles. The product is mainly used in cutting tool manufacturing, automotive machining, aerospace components, mold making, electronics manufacturing and precision engineering. The market excludes general surface grinders, cylindrical grinders and manual tool sharpeners.

The industry chain includes castings, linear guides, ball screws, CNC systems, spindles, servo motors, grinding wheels, coolant systems, measurement probes, tool holders and automation modules. Midstream production covers machine structure design, precision machining, spindle integration, motion control calibration, grinding software

configuration, assembly, testing and commissioning. Downstream demand comes from cutting tool producers, machine shops, automotive suppliers, aerospace manufacturers, mold makers and precision parts producers. Growth is driven by carbide tool demand, complex tool geometries, automated regrinding, labor reduction and high-precision manufacturing.
