Fixed Area Gas Monitor refers to an industrial safety monitoring device installed at a fixed location to continuously monitor combustible gases, toxic gases, oxygen concentration or volatile organic compounds in a specific area. The product usually consists of gas sensors, transmitters, alarm units, controllers and communication modules, and can be connected with plant DCS, PLC, fire protection systems or safety interlock systems to achieve long-term online monitoring, alarm triggering, data transmission and linked control. It is mainly used in oil and gas, chemical processing, mining, manufacturing, power generation, food and beverage, and building safety applications.

The upstream of Fixed Area Gas Monitors mainly includes gas sensors, infrared optical components, electrochemical sensors, catalytic bead sensors, semiconductor components, control chips, explosion-proof enclosures, display modules, power modules, communication modules and alarm components. Among these, sensors, explosion-proof certified parts and core electronic control modules have a relatively strong impact on product performance and cost. Downstream customers are mainly concentrated in oil and gas production and refining, chemical parks, mining, manufacturing plants, food and beverage factories, power plants, wastewater treatment,
