The global Fixed Ball Valve market size is predicted to grow from US\$ 13810 million in 2025 to US\$ 17950 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

A fixed ball valve, or trunnion ball valve, is a type of mechanical valve used for fluid control in pipelines. It features a spherical, perforated ball with a central bore (a hole through the center) that is mounted and fixed in place by a trunnion or support shaft. This ball has an opening (port) through which fluid can flow when the valve is in the open position and is rotated 90 degrees to obstruct the flow when in the closed position.

Continued development of advanced materials, such as corrosion-resistant alloys and high-temperature materials, to improve the durability and performance of fixed ball valves in harsh operating conditions.
