A fixed brake caliper is a brake component mounted on an axle or suspension system. It uses multiple pistons to push the brake pads to clamp the brake disc, thereby generating friction to slow down or stop the vehicle. Unlike floating calipers, the fixed caliper body does not rotate with the wheel and has a more robust structure. It has excellent braking force uniformity, high rigidity and good heat dissipation performance, and is widely used in high-performance sports cars, heavy vehicles, racing cars and other occasions that require strong braking force and stability.

The global Fixed Brake Calipers market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
