The report requires updating with new data and is sent in 48 hours after order is placed.

The global Fixed Capacitors market size is predicted to grow from US$ 10190 million in 2025 to US$ 16250 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

A fixed capacitor is a capacitor that stores a fixed amount of electric charge (capacitance) and this is not adjustable at any instance. Their values are mostly fixed while manufacturing. A fixed capacitor helps maintain a constant charge and energy output in electric appliances or devices.

The increasing use of fixed capacitors in high power electronic circuits and consumer electronics is driving the demand for fixed capacitors. Capacitors determine the stability and reliability of a system, making them one of the most important components in any electronic design. Due to their high dielectric constant, stable charge flow and thin dielectric layer, they are widely used to meet the growing demand for high charge density materials.

The increasing popularity of electric vehicles and government initiatives such as tax breaks and subsidies for electric vehicles will promote the adoption of fixed capacitors in electric vehicles. This will ultimately drive the fixed capacitor industry during the forecast period. Due to stable charge flow in DC/DC converters and motor generators and the use of aluminum electrolytic capacitors, the adoption of fixed capacitors will increase during the forecast period. In January 2021, Kimay launched the A780, PHA225 and PHH225 hybrid aluminum electrolytic capacitors for automotive applications as well as industrial applications. These factors will have a positive impact on the outlook of the fixed capacitor industry.
