A fixed IP camera is a type of network - connected surveillance camera that has a fixed position and orientation. It is designed to capture video footage within a specific field of view and transmit the video data over an IP (Internet Protocol) network. Unlike traditional analog cameras, which rely on coaxial cables for video transmission, fixed IP cameras digitize the video signals at the source and send them as digital data packets through the network.

These cameras are equipped with their own IP addresses, allowing them to be accessed and managed remotely via a web browser, a dedicated surveillance software, or a mobile application. They often come with features such as high - definition video resolution, adjustable viewing angles (although the position is fixed), night vision capabilities, motion detection, and alarm notifications. Fixed IP cameras are widely used in various settings, including homes, offices, shopping malls, factories, and public spaces, for security monitoring and surveillance purposes.

United States market for Fixed IP Camera is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
