Fixed-line communication equipment refers to the collection of wired networks, which are used for voice and data communications. The fixed line can be viewed as a connection to an end-customer by means of a cable, using which the user will be able to make phone calls or connect to the internet. Fixed line networks evolved from circuit switch-based copper wires, primarily to establish a voice call between two users.

The adoption rate of routers is high because they enhance the network interoperability. The fixed line communications equipment market is witnessing growth in the routers segment because routers are used to manage the data traffic in an efficient manner. They are essentially used at every level of internet gateways and used to join multiple networks together.
