Residual Current Devices help protect people and equipment against electrical shocks caused by indirect contact. RCDs work together with Miniature Circuit Breakers (MCB) or fuses, covering the whole system against potentially damaging thermal and dynamic stresses of any overcurrent. Fixed RCDs provide the highest level of protection and are installed in the fusebox. They're designed to provide protection for groups of circuits or individual units. A fixed RCD will protect all of the sockets and wiring on a circuit and all the connected appliances to that circuit.

The global Fixed Residual Current Devices market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
