The global Fixed Towbars for Retrofit market size is predicted to grow from US$ 313 million in 2025 to US$ 402 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

In 2025, global production of fixed towbars for retrofit reached 2.95 million units, with an average selling price of US$108.40 per unit, production capacity of 3.58 million units, and a gross margin of 27.2%.

Fixed towbars for retrofit are permanently mounted towing devices installed on a vehicle’s chassis or rear frame through the automotive aftermarket after the vehicle has been manufactured and delivered. They generally comprise a crossmember, vehicle-specific mounting brackets, connecting arms, and a fixed tow ball. The product must be matched to the vehicle’s chassis structure, towing capacity, and applicable regulatory requirements. It is used for towing caravans, utility trailers, and boat trailers and may also support bicycle or cargo carriers, offering relatively low cost, structural reliability, stable load-bearing capacity, and limited maintenance requirements.

The global fixed towbars for retrofit market maintained stable growth in 2025, mainly driven by the expanding installed base of SUVs, pickup trucks, and light commercial vehicles, together with increasing demand for camping, caravan travel, boat transportation, and outdoor activities. Compared with detachable and electrically retractable products, fixed towbars are less expensive and more durable, giving them clear advantages among price-sensitive consumers, commercial vehicles, and frequent-towing applications. Europe and North America remain the principal consumer markets, while online automotive-parts platforms, specialist towing-equipment distributors, and retrofit workshops represent the major sales channels. As electric-vehicle penetration

increases, manufacturers need to strengthen chassis compatibility, crash-safety engineering, towing-capacity validation, and electrical wiring integration.
