The global Fizeau Interferometer-Based Meter market size is predicted to grow from US$ 6.7 million in 2025 to US$ 10.96 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

The static wavemeter with no moving parts is based on static Fizeau interferometer, which consists of two plane reflecting surfaces with a slight deviation from exact parallelity. A Fizeau interferometer is a very simple optical system consisting of a collimator lens, a glass plate called a reference plane, and a measurement mirror. Light incident on the Fizeau interferometer is collimated by the collimator lens and then partially reflected as it passes through the reference plane. The light passing through the reference plane is reflected by the measurement mirror and interferes with the light reflected by the reference plane, forming a stripe-like pattern.

Technological innovations have an important role in driving the growth of the market. To sustain in the competitive market, vendors should develop new ideas and technologies and stay up to date with the advanced technologies.

For a long time, wavemeters have been monopolized by foreign companies such as Keysight and Bristol in the United States, Yokogawa in Japan, and HiFinesse in Germany.

Compared with developed international regions such as Europe, America and Japan, there are opportunities for large-scale and rapid market development in the emerging Asia-Pacific and Latin American regions. In particular, China has self-produced wavemeter products, and the downstream demand for wavemeters will grow faster.
