Flame-retardant ABS (flame-retardant acrylonitrile butadiene styrene): ABS is a common engineering plastic composed of styrene, acrylonitrile and butadiene. In order to improve the flame retardant properties of ABS, flame retardants are usually added to it. These flame retardants can be bromine-based, phosphorus-based or nitrogen-based compounds, which can release gas when the material is exposed to flames, inhibit the spread of flames and reduce the burning speed. Flame-retardant HIPS (flame-retardant high-impact polystyrene): HIPS is a high-impact polymer typically blended from polystyrene and other polymers. Similar to ABS, flame retardant HIPS can also improve its flame retardant properties by adding flame retardants. These flame retardants are similar to those used in ABS, and they release gases when the material is heated and stop the spread of flames.

The global Flame Retardant ABS and HIPS market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
