High impact polystyrene, also commonly referred to as HIPS, is a thermoplastic material made from elastomer-modified polystyrene. A two-phase system consisting of a rubber phase and a continuous polystyrene phase has evolved into an important polymer commodity in the world.

Engineering plastics are generally used to manufacture mechanical parts, containers and packaging substances. They are extensively utilized as a preferred alternative to metal and ceramics due to their lightweight property. Additionally, they provide excellent load capacity, mechanical strength, thermal stability and durability while offering designing flexibility. Some of the commonly used engineering plastics variants include polyamides (PA), polycarbonates (PC), nylon 6, acrylonitrile butadiene styrene (ABS) and polysulphone (PSU). They are widely utilized in the manufacturing of car bumpers, dashboard trims, ski boots, helmets and optical discs across multiple sectors. The global engineering plastics market size reached US$ 113.6 Billion in 2022, expects the market to reach US$ 180.2 Billion by 2028, exhibiting a growth rate (CAGR) of 7.31% during 2023-2028.
