Flame-retardant high-voltage cable is an electrical cable used to transmit high-voltage power. Its main feature is its flame-retardant performance. In the event of a fire, flame-retardant cables can effectively slow down the spread and spread of fire, reduce losses caused by fire, and protect people's lives and property. This kind of cable usually consists of conductor, insulation layer, flame retardant layer and sheath layer. The conductor is the transmission carrier of current. The insulation layer is used to isolate the current from the external environment. The flame retardant layer is a key part of the cable. It can release a small amount of non-flammable gas when heated, forming a protective layer of insulation, thereby slowing down the spread of flames. . The jacket is used to protect the cable from damage from the external environment.
