Flame Retardant Pressure Sensitive Safety Mat is an advanced safety protection product that combines flame - retardant properties with pressure - sensing functions. It is made of special materials with flame - retardant performance. These materials are professionally treated to effectively suppress combustion and prevent the spread of flames when exposed to a fire source, reducing the fire risk. At the same time, the safety mat is equipped with a sensitive pressure - sensing device. When an object applies pressure to its surface, the sensing device can quickly detect the pressure change and immediately transmit a signal to the connected control system. In industrial production scenarios, it is often laid around dangerous mechanical equipment such as punching machines and injection molding machines. Once a person accidentally steps into the area of the safety mat, the pressure - triggered mechanism will immediately stop the equipment to prevent personnel from being injured by the machinery. In terms of fire safety, its flame - retardant property provides additional fire protection for the workplace. In addition, it is also widely used in some public places or areas with high fire - prevention and safety requirements to ensure the safety of personnel and property.
