The Flameproof Explosion-proof Junction Boxes and Terminal Boxes are electrical equipment components featuring robust explosion-proof enclosures. Their design is centered around withstanding internal explosion pressures through the enclosure's sturdy structure and preventing the propagation of explosion flames or hot gases to the external environment via enclosure joints, thereby preventing the ignition of surrounding explosive gas mixtures. These enclosures are constructed from special materials with adequate mechanical strength and explosion resistance, and their joint designs adhere to stringent clearance and length requirements to ensure effective isolation during explosions. They are commonly used in petroleum, chemical, and other flammable and explosive environments.
