The global Flange Mounted Bearing market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Flange mounted bearings are used when the shaft axis is perpendicular to the bearing mounting surface. They incorporate a sealed bearing that is preassembled into a flanged housing. The housing contains a precision ground surface perpendicular to the bearing axis and two, three or four mounting holes, depending on the style. The bearing can be unbolted and removed, which makes bearing replacement easier and faster than traditional rotary bearings that must be press fit into a housing. Flange mounted bearings can also support heavy loads, which protects the shaft from deflection, which could cause vibration or other damage.

United States market for Flange Mounted Bearing is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
