A flange screw is a type of fastener that combines a hex head screw with an integrated flange. The flange, which is wider than the head, serves as a built-in washer. This design distributes the clamping load over a larger area, reducing the risk of damage to the material being fastened and providing a more secure connection. Flange screws are commonly used in automotive, construction, and industrial applications where a strong, reliable fastener is required. They are available in various materials, sizes, and thread types to suit different needs.

The global Flange Screw market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
