The global Flanged Circulation Heater market size is predicted to grow from US$ 318 million in 2025 to US$ 403 million in 2031; it is expected to grow at a CAGR of 4.0% from 2025 to 2031.

Rising demand for energy consumption in manufacturing, oil & gas, and other industries, along with increased need for energy efficiency due to pricing issues, are the key demand drivers for the market. According to the International Heavy Equipment Manufacturers Association statistics, industrial heaters account for about 74% of the total industrial manufacturing and process energy engineering. Furthermore, ease of material switching and extensive process and equipment engineering are driving the demand for the product globally. High affordability and affordable price range of industrial heaters are the key demand drivers for the market. Furthermore, reduction in energy consumption brought about by industrial heaters is believed to drive the demand for the product. Manufacturers' increasing inclination to adopt technology and automation in equipment handling for electrical system maintenance is a key factor driving the demand for industrial heaters. Additionally, increasing adoption of heaters in the plastics industry to maintain furnace temperature is expected to drive market growth. The growing trend of equipment manufacturers to save energy and reduce operating costs is driving the demand for this product across the industrial sector. Modernization of equipment heating and safe operation provided by duct heaters and circulation heaters is expected to drive the growth of the market over the forecast period.
