Abstracts

The global Flare Gas Recovery Systems market size is predicted to grow from US\$ 2926 million in 2025 to US\$ 4560 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Flare gas recovery systems are used in petroleum refineries to reduce flare emissions and offset the plant's purchased fuel gas. The total cost of a project (equipment and installation) is typically recovered in two to three years (sometimes less) depending on system throughput and the value of recovered gas.

Increasing power generation applications have been a primary factor fueling the demand for flare gas recovery systems on a global level. A majority of producers re-inject flare gas in natural gas production wells in order to maintain the optimum pressure inside the wells.
