The global Flash Spinning Non-woven Fabrics market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Flash spinning is a specialized process used primarily in the production of nonwoven fabrics. This technique involves the rapid evaporation of a solvent from a polymer solution, resulting in the formation of fine fibrils that bond together to form a strong, durable, and breathable fabric. This report studies flash spinning nonwoven fabrics market.

Flash spanning was successfully developed by DuPont in 1957, and reached a production scale of 20,000 tons/year in the 1980s. Asahi Kasei of Japan also began to develop and industrialize it in the 1980s, but later the technology of the company was acquired by DuPont and the production line was forced to shut down. Therefore, for a long time, the technology was exclusively monopolized by DuPont until recent years when Chinese scientific research team made a fundamental breakthrough from zero to one.
