Flash spinning technology service refers to the use of flash spinning technology to provide customers with a full range of services from technical consultation, equipment supply, process design to production training. This technology is a spinning method that extrude polymer solution above the boiling point of the solvent and under high pressure through a spinneret and instantly reduce the pressure to make the solvent evaporate quickly, thereby preparing ultrafine fibers. Flash spinning technology services are widely used in many fields such as medical packaging, building energy conservation, safety protection, industrial innovation and creative life, providing customers with high-quality fiber products and solutions.

The global Flash Spinning Technology Services market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
