Flashback arrestors are safety devices used in welding and cutting operations to prevent the dangerous phenomenon of flashback, where the flame from a torch travels back through the hoses and equipment. They function by stopping the reverse flow of gases and extinguishing any flames that may reach the equipment, thereby protecting both the user and the equipment from damage or explosion. Typically installed at the connection points between the gas cylinders and the hoses, flashback arrestors incorporate a flame arrestor and a check valve to effectively manage and contain potential hazards, ensuring a safer work environment in welding and cutting operations.

The global Flashback Arrestors market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
