The flat-bottomed round nose knife is a cutting knife with a flat bottom head, but the blade part presents an arc shape. This design enables the flat-bottomed round nose knife to maintain the stability of plane processing and adapt to curved surface processing with a certain arc during processing. Flat-bottomed round nose knives are mainly used for rough processing, plane finishing and side finishing of mold blanks, especially for rough processing of molds with higher material hardness. At the same time, due to its unique shape design, the flat-bottomed round nose cutter also performs well when processing workpieces with complex contours, such as automobile bodies, ship hulls, molds and engraving.

The global Flat Bottom Round Nose Cutter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
