Flat glass commonly comes in a sheet form and is produced in a flat state. These glass components are mainly used in the construction, automotive, solar glass, and other end-use industries. Flat glass components are used in windows, doors, facades, decorations, windshields, partitions, electronic equipment, interior fittings, and furniture.

The new buildings segment dominated the flat glass market for the construction industry and accounted for a major part of the overall market’s share. The recent increase in the number of high-rise buildings and green buildings in both the residential and commercial segments has created a high requirement for energy-efficient flat glass. This rising demand will support the dominance of this segment in the global market for the next few years.
