A flat grinding machine is a machine tool used for surface grinding, a type of machining process in which a grinding wheel rotates on a horizontal axis to grind flat surfaces. This machine typically has a flat grinding wheel mounted on a spindle and a reciprocating table that moves back and forth under the grinding wheel. The workpiece is placed on the table and fed into the grinding wheel, which removes material to create a flat surface with a high level of precision and smoothness. Flat grinding machines are commonly used in the manufacturing industry for finishing machined parts and components to tight tolerances.

The global Flat Grinding Machine market size is projected to grow from US$ 923 million in 2024 to US$ 1345 million in 2030; it is expected to grow at a CAGR of 6.5% from 2024 to 2030.
