The flat panel liquid crystal display (LCD) controller is responsible for converting input video signals into a data format that can be displayed on an LCD panel. It is also responsible for outputting the data based on instructions from the CPU that control the system.

Based on instructions from the system control CPU, the LCD controller writes drawing data to the built-in or external image memory. At the same time, it reads the display data stored in the image memory and outputs it to the LCD panel.

The presence of the Flat panel liquid crystal display (LCD) controller reduces the load on the system control CPU for the drawing process.
