The global Flat Plate Laser Cutting Machine market size is predicted to grow from US$ 581 million in 2025 to US$ 786 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Flatbed laser cutting machine is a CNC processing equipment that uses a high-energy-density laser beam as a heat source to accurately cut metal or non-metallic flat materials. Its working principle is based on the thermal mechanism of laser and material. The laser beam energy is concentrated in a small area through the focusing system, so that the material can be quickly melted, vaporized or reach the ignition point. At the same time, the high-speed coaxial airflow is used to blow away the slag to achieve non-contact cutting. The equipment integrates CNC system, optical system, mechanical transmission system and auxiliary gas device. It can perform high-precision processing of two-dimensional contours of metal plates such as carbon steel, stainless steel, aluminum alloy, titanium alloy, etc. It has the advantages of high cutting section quality, small heat-affected zone, high processing flexibility (quick switching of graphics), etc. It is widely used in machinery manufacturing, sheet metal processing, automotive parts, electronic appliances and other industries.

United States market for Flat Plate Laser Cutting Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
