Flat rack container frame is a special container structure designed for transporting extra-long, extra-wide or extra-high goods. It has an open design without top and side walls, which is convenient for loading, unloading and fixing of irregular goods such as large machinery and equipment, steel, wood, vehicles, etc. It is equipped with foldable or fixed columns at both ends to support the goods and ensure stacking safety. The standard size is usually 20 feet or 40 feet, and the structural material is mostly high-strength steel with a high load-bearing capacity. Flat rack container frames are suitable for multimodal transport systems such as sea, rail, and road. They are commonly used as a means of transportation for the export of large engineering projects, wind power equipment, and heavy industrial equipment. Due to its flexibility and open structure, this type of container is widely used in engineering machinery, energy equipment, and heavy industry manufacturing in Europe, America, and Southeast Asia.
