Flat rack container spreader is a heavy-duty spreader specially used for lifting flat rack containers. Its structure mostly adopts an open ultra-high steel frame design with fixed or adjustable lifting points to adapt to the container form without top and side walls and the ultra-high, ultra-wide and large cargo it carries. This type of spreader often integrates automatic twist lock devices, remote control operating systems and high-strength connecting arms. It is compatible with 20-foot and 40-foot standard flat rack containers and provides higher safety and stability when lifting special cargo such as wind turbine blades, mechanical equipment, steel components, etc. Due to the need to achieve effective lifting at a high position, its frame height is usually greater than that of conventional container spreaders, so it is classified as an extra-high spreader and is widely used in port terminals, large-scale logistics bases and construction sites.
