According to our (LP Info Research) latest study, the global Flat Transformer market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Flat Transformer is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Flat Transformer market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Flat Transformer are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Flat Transformer. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Flat Transformer market.

Planar transformers are small components with high surface-to-volume ratios and very short thermal paths. It is good for heat dissipation. The turn-to-turn losses between the primary and secondary windings are small. The unique geometry of this magnetic core can effectively reduce the core loss. So it can achieve high magnetic flux density. It can work between -40?~130?. Good coupling between windings can keep the leakage inductance between winding turns to a minimum. The wiring from the output to the auxiliary components is short and tightly fitted, so that the leakage inductance on the wiring between the windings is minimal. Excellent high-frequency characteristics Prior to this, when the transformer was operated at high frequency, the switching loss would increase and the transformer would overheat.
