Fleet telematics solutions are software and hardware systems used to manage and monitor fleet operations. They collect, analyze, and transmit vehicle operating data in real time, including location, speed, fuel consumption, and driving behavior. Leveraging cloud computing, the Internet of Things (IoT), and big data analytics, this solution enables fleet managers to remotely monitor vehicle status, optimize routes, manage maintenance, analyze driving behavior, and improve overall operational efficiency. It is widely used in the operation and management of various fleets, including logistics companies, public transportation companies, and taxi companies. The upstream of fleet telematics solutions primarily relies on IoT device manufacturers, sensor suppliers, and communication technology providers, whose components are used for real-time data transmission and monitoring. Downstream demand comes from fleet operators, logistics companies, and transportation companies, particularly driven by the rapid development of intelligent transportation and automated logistics, leading to a significant increase in demand for fleet management systems. With the advancement of vehicle intelligence and green logistics, the market prospects for fleet telematics solutions are very broad, especially given the continued increase in global demand for improved transportation efficiency, optimized energy consumption, and enhanced vehicle safety; therefore, it is expected to maintain rapid growth in the future.
