The flexible nozzle is a nozzle with special functions, and its spray direction can be deflected relative to the axis of the nozzle. This type of nozzle is mainly used in occasions where the jet flow direction needs to be changed flexibly, such as cleaning, painting, dispensing, etc. A flexible nozzle generally consists of a nozzle body that can rotate around its own axis, a drive mechanism, and a control system. Driven by the driving mechanism, the flexible nozzle can rotate according to the set trajectory, so that the jet flow can reach the target position accurately. This nozzle has the advantages of simple operation, strong flexibility, wide application range, etc., and has been widely used in various fields.
