## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Flexible coaxial cable is designed to transmit radio frequency (RF) signals within a wide range of applications, from telecommunications to data and video signals, while offering the flexibility needed for installation in varied environments. Unlike semi-rigid coaxial cables, which are designed to hold their shape once bent, flexible coaxial cables can bend and flex during use without damaging the cable or significantly degrading signal quality. This makes them particularly useful in applications where the cable needs to navigate around corners or in spaces where rigid cables would be impractical.

The global Flexible Coaxial Cable market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
