The flexible double-beam crane is a new type of light lifting equipment with a double-beam structure design and a flexible suspension system as the basis. It is mainly used in multi-station, long-distance and high-frequency material handling scenarios. Compared with traditional rigid double-beam cranes, flexible double-beam cranes have the advantages of lighter structure, more flexible installation and smoother operation. Its main components include flexible track system, double-beam bridge, trolley, lifting device and electronic control system, which can realize multi-directional and long-stroke precise material transportation. Due to the modular design, the flexible double-beam crane can be flexibly configured according to the factory layout and has strong adaptability. It is particularly suitable for production lines, assembly workshops, logistics centers and clean environments. It can not only effectively improve work efficiency and operation safety, but also reduce equipment maintenance costs and energy consumption. It is one of the important lifting equipment that is indispensable in modern intelligent manufacturing and flexible production. With the development of industrial automation and intelligence, the application proportion of flexible double-beam cranes in the field of high-end manufacturing is gradually increasing.
