The Flexible Industrial Endoscope is a non-destructive testing device based on optical imaging and flexible conduit technology, comprising a bendable fiber-optic bundle or miniature camera module, a flexible snake-bone conduit, and an image processing system. Operated manually or mechanically, the conduit navigates complex pipelines, confined cavities, or irregular structures through multi-directional bending and targeted extension, transmitting real-time internal images via high-definition imaging and illumination modules. Renowned for its non-destructive nature, flexibility, and environmental adaptability, it is applied in industrial settings such as aerospace engines, nuclear equipment, pressure vessels, and precision machinery for defect detection, corrosion evaluation, and foreign object localization, mitigating inspection risks and enhancing maintenance efficiency.
