## Abstracts

The global Flexible Material Laser Cutting Machine market size is predicted to grow from US$ 2653 million in 2025 to US$ 4716 million in 2031; it is expected to grow at a CAGR of 10.1% from 2025 to 2031.

Flexible material laser cutting machine is a precision processing equipment designed for processing non-metallic flexible materials. It heats the material to melt or gasify instantly after focusing a high-energy laser beam (such as CO2, optical fiber or ultraviolet laser), and blows away the slag with auxiliary gas to achieve high-precision, non-contact cutting of flexible materials such as cloth, leather, rubber, plastic film, composite materials, etc. Its core advantage is that it can process complex patterns, smooth edges without burrs, and can adapt to the needs of continuous processing of coils or positioning of special-shaped materials. At the same time, it has the characteristics of high efficiency, low loss, and high degree of automation. It is widely used in clothing, automotive interiors, electronic components (such as flexible circuit boards), medical consumables and other fields. It is a key technical equipment to improve the efficiency and precision of flexible material processing.

United States market for Flexible Material Laser Cutting Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Flexible Material Laser Cutting Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
