The global Flexible and Foldable OCA market size is predicted to grow from US\$ 595 million in 2025 to US\$ 1044 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

Optical acrylic adhesive (OCA) is a crucial raw material for touchscreens, primarily used for bonding optical components such as cover glass, lenses, consumer electronics, and automotive screens. Typically, OCA is a double-sided laminated product made by creating a substrate-free adhesive film from optical acrylic pressure-sensitive adhesive, then bonding a release film to the top and bottom layers. Flexible and Foldable OCA is an optically transparent adhesive material specifically designed for flexible organic light-emitting diode (OLED) display modules. Besides requiring good optical performance and adhesion like regular OCA, it also needs to focus on bending performance to help the screen achieve better flexibility and a longer bending lifespan.

In 2025, the global production of Flexible and Foldable OCA was approximately 25.72 million square meters, with an average price of approximately US\$23.65 per square meter and a gross profit margin of approximately 22.32%.

The OCA industry chain includes stages from raw materials to coating & die-cutting, touch display modules, and terminal equipment. OCA mainly consists of adhesives and film materials. Film materials include PET polyester film and PO polyester film, while adhesive materials include acrylic pressure-sensitive adhesive and polyurethane pressure-sensitive adhesive. Midstream manufacturers first coat the film material with adhesive materials, then perform processing procedures such as die-cutting, and finally supply the finished product to downstream touch display module manufacturers.

With the continuous upgrading of display technology and the ongoing expansion of the smart terminal market, the UV-curable OCA optical adhesive market has experienced rapid development. High-end display technologies such as OLED, AMOLED, and flexible screens place higher demands on optical adhesive materials with bubble-free properties, high transparency, and high reliability, driving the continuous increase in the application penetration rate of UV-curable OCA. At the same time, applications outside of consumer electronics, such as automotive center console screens, dashboard displays, and HUD head-up displays, are also growing rapidly and will become an important source of new demand in the coming years. The global electronics manufacturing industry is evolving towards thinner, lighter, higher-resolution, and modular designs, further increasing the demand for high-performance OCA materials. Despite the promising market growth prospects, the UV-curable OCA optical adhesive industry still faces several challenges. First, fluctuating raw material costs and the R&D investment required for high-performance formulations keep production costs high, limiting the profit margins of some mid-to-low-end manufacturers. Furthermore, the process quality of optical adhesive products requires high-level equipment and environmental control, and the preparation and curing processes are complex, presenting certain technical barriers. Industry standards are not yet globally unified, and compliance requirements in different regions also pose challenges for companies' cross-border operations. In addition, alternative adhesive materials such as pressure-sensitive adhesives and hot melt adhesives face competition in some low-end applications. In the downstream market, consumer electronics remains the largest single source of demand for UV-curable OCA optical adhesives. With the accelerated iteration of smartphones, tablets, laptops, and wearable devices, especially the increased adoption of foldable screens, flexible screens, and micro-LED display technologies, the demand for high-transparency, high-durability optical adhesive materials continues to grow. At the same time, emerging niche markets such as automotive electronics and medical display devices are also showing rapid growth momentum. In the coming years, with the widespread adoption of technologies such as smart cockpits and Advanced Driver Assistance Systems (ADAS), the applications of OCA optical adhesives will further expand from traditional mobile terminals to the automotive, industrial, and medical markets.
