Flexible OLED display screen is a bendable, ultra-thin display device made of plastic substrate material. Flexible OLED display screen is made by replacing the glass substrate of traditional OLED display with flexible plastic substrate, which makes it bendable and foldable. Unlike rigid OLED, flexible OLED can bend and twist freely without damaging the display performance. Due to the use of plastic substrate, flexible OLED has significantly reduced thickness and weight compared with traditional screens. The toughness of plastic substrate enables flexible OLED to withstand a certain degree of curling without creases or damage. OLED technology itself has the characteristics of low power consumption. Flexible OLED maintains this advantage while further improving energy efficiency. Flexible OLED also supports high-resolution display and can present clear and delicate images. The manufacturing process of flexible OLED is relatively complex and involves multiple precise steps, including the deposition of organic light-emitting materials and thin film encapsulation. These steps require high-precision equipment and a strict production environment to ensure product quality.

The global Flexible OLED Display Screen market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

Flexible OLED display screens are widely used in many fields such as smartphones, tablets, wearable devices, and car displays. As consumers' requirements for display quality increase, flexible OLED has become a market hotspot with its high image quality, low power consumption, and bendability. Flexible OLED technology continues to make breakthroughs, and performance indicators such as high resolution, high refresh rate, and long life are constantly improving, bringing users a better visual experience. The flexible OLED industry chain covers the entire process from upstream raw material supply, midstream panel manufacturing to downstream terminal applications. The upstream mainly includes raw material suppliers such as OLED organic light-emitting materials, conductive materials, and substrate materials, as well as key equipment manufacturers such as coating machines, photolithography machines, and packaging equipment. The midstream is the manufacturing link of OLED panels, and the main companies include BOE A and TCL Technology. The downstream is the terminal application fields such as smartphones, TVs, and wearable devices. In summary, the flexible OLED display screen market is in a rapid development stage, and market demand continues to grow.
