Flexible Printed Heaters are directly printed on polyester (PET), polyimide (PI), polycarbonate, etc. according to user requirements and specific operating parameters. Flexible printed heaters are based on positive temperature coefficient (PTC) materials that enable the heater to control its desired temperature or on fixed resistance heater designs that require a control circuit to control the temperature. The heater can be easily mounted using pressure-sensitive adhesive, field-applied adhesive, Velcro, etc., according to the requirement. It has advantages over conventional heaters such as being light weight, flexible to take place, providing uniform heat distribution, etc.

The global Flexible Printed Heaters market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
