The global Flight Certifiable Mission Computer market size is predicted to grow from US$ 3488 million in 2025 to US$ 5723 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Global flight certifiable mission computers sales will total approximately 91,400 units in 2024, with an average price of approximately $36,400 per unit and an industry average gross profit margin of approximately 31%. This device is a high-reliability embedded computing core used in military and civilian aviation platforms, responsible for mission planning, sensor data fusion, navigation and flight control coordination, fire control management, and communication link control. Typical specifications include a multi-core PowerPC or ARM architecture processor (2–8 cores), 8–32GB of shock-resistant memory, MIL-STD-1553B, ARINC 429, and Gigabit Ethernet interfaces, and compliance with DO-254/DO-178C avionics safety standards and a -40°C to +85°C operating temperature range. Upstream suppliers focus on the supply of aviation-grade processors, FPGA modules, heat dissipation components, and vibration-resistant enclosures, raw material costs account for approximately 47% of the total system cost; downstream customers include complete aircraft manufacturers and military UAV system integrators. General Dynamics Mission Systems has an annual production capacity of approximately 18,000 units at its production bases in Massachusetts and Arizona. Its products are mainly used on platforms such as the US military's F/A-18, and customized models are provided to NATO allies.
