The global Flight Propulsion Systems market size is predicted to grow from US\$ 198900 million in 2025 to US\$ 299400 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

A flight propulsion system generally consists of an aircraft engine and some means to generate thrust, such as a propeller or a propulsive nozzle. An flight propulsion system must achieve two things. First, the thrust from the propulsion system must balance the drag of the airplane when the airplane is cruising. And second, the thrust from the propulsion system must exceed the drag of the airplane for the airplane to accelerate. In fact, the greater the difference between the thrust and the drag, called the excess thrust, the faster the airplane will accelerate.

North America is the largest market with about 56% market share. Europe is follower, accounting for about 39% market share.

The key players are CFM, General Electric Company, Rolls-Royce Holdings, United Technologies, Safran, Honeywell, GKN Aerospace, MTU Aero Engines, United Engine Corporation, Aero Engine Corporation of China etc. CFM is the largest manufacturer with about 40% market share.
